To whom it may concern,

I am interested in the Intern position. With my experience working in cross-functional teams, passion for coding, and keen eye for detail in numbers and trends, I believe I would be an exceptional fit for this position.

During my time as a research lab assistant, I honed my skill in data collection and analysis throughout the various projects I contributed to. In a collaboration with NASA, our team received a biological sample in which we determined hormones through the adaptation of electrochemical analysis. I assisted in carrying out the scientific procedures while simultaneously leading the data inquiry. This extensive data collection allowed us to improve upon practical molecular sensors, resulting in a significant reduction in time needed for future research endeavors.

Because of my passion for student life and data analysis, I conducted a statistical study on campus that observed the behavior of student study habits in relation to their other responsibilities. I gathered responses from students through both online surveys and in-person methods in order to bypass possible biases. Using both R and Excel, I organized and created a presentation that laid out my findings in an easily followable and comprehensive fashion.

As a skilled critical thinker and receptor to learning, I am confident that I would excel in this position and prove to be a valuable asset. I am available at your convenience and hope to hear from you soon.

Thank you for your time and consideration.

Yours Sincerely,

Aidan Nguyen
